Your Score	Understanding Concepts	Calculation Accuracy	Problem-Solving Strategy
4	The student can calculate the volume of the cylinder and also the hemisphere. The student understands that the question requires the calculation of a composite volume.	The student performs calculations accurately and efficiently, consistently checking and verifying their work with attention to detail.	The student effectively selects and applies the relevant formulas.

Your Score	Understanding Concepts	Calculation Accuracy	Problem-Solving Strategy
4			
3			The student understands how to substitute values into the volume formula but has difficulty calculating the volume of a sphere.
2	The student shows partial understanding of the concepts. They may confuse the components or make errors in identifying them.	The student makes some errors but attempts to correct them. They may not consistently check their work.

3	The student can calculate the volume of the cylinder or the hemisphere but lacks understanding of composite volume.	The student performs calculations accurately with minimal errors and checks their work to ensure correctness.	The student understands how to substitute values into the volume formula but has difficulty calculating the volume of a sphere.
